ROAD # _____

STATION # _____

The following fish stream protection prescriptions and recommendations apply:
based upon resistance of habitat to alteration and fish habitat management
unit objectives.

- ☒ 1.) Directional falling (to include lining and jacking if necessary) of timber away from stream course.
- ☒ 2.) Split the yarding on stream course or full suspension of timber over stream course.
- ☒ 3.) Removal of all introduced debris (to include root wads that may enter stream course) from stream course concurrent with yarding.
- ☒ 4.) Yard timber impacting stream course same season as felled.
- ☐ 5.) Windthrow impacting stream course will be marked for "leave" and "take" timber.
 - a.) Timber marked with blue ribbon should be removed with least possible disturbance to stream course.
 - b.) Timber marked with yellow ribbon should be left in place or will require special consideration upon removal.
- ☒ 6.) Chunk clean (removal of introduced debris 3 in. diameter or 6 ft. length or larger).
- ☒ 7.) Avoid yarding up or down protected stream courses.
- ☐ 8.) Recommend input from Soil Scientist and/or Hydrologist.
